[Free Trial Download](#)

Our software will allow you to record directly to your laptop hard drive by using a standard camcorder with a FireWire interface or you may also use a USB Web cam or composite video camera.

Before and after a recording is made you can tag the video clips with your predefined user text that which will allow you to sort the video at a later time. You also can post- edit video clips at your convenience. This allows you to tag additional text notes to any video clip.

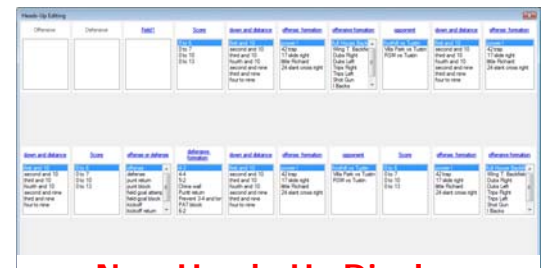

Import Video Files

Users can now import video files in three ways- HDV tape capture with scene detection, DVD capture with scene detection and file transfer direct from camcorder hard drive.

Heads-Up Display & Post-Editing/Tagging of Video Clips

New features have enhanced the post-editing of video clips that have been imported. Post-editing now incorporates the use of "heads-up display" for quick and easy tagging of video files. By simply playing the video file and

then holding down the Ctrl+Tab keys, a transparent "heads-up display" will appear and allow the user to quickly select their tagged values.

New Heads-Up Display

HDV-DVD-Producer

Making individual scouting DVDs has never been easier. Once you've tagged individual video clips the software will automatically sort all video clips into your own user-defined groups. These groups can contain items such as serves, sets, blocks and kills. And the software will give you the opportunity to produce as many DVDs as needed.

Specific Training of Drills & Game Situations

"HDV-Performer 5.2" will provide recorded/sortable documentation for improved results. This allows coaches and players to recall previously recorded video, based on certain game situations and events that took place during the game. For example, you may wish to view only serves. You can quickly review all such plays without fast forwarding through the rest of the plays. For individual coaching you can replay only the plays that a particular player was involved in.

Team Scouting & Training

Whether archiving your opponent's tendencies or your team's success and failure within specific parameters, "HDV-Performer 5.2" offers a wide range of structure that is totally at the discretion of you the user. You customize the "heads-up display" to meet your specific guidelines and your staff can customize it differently for their purpose.

About us

HDV-Sports was founded in 1995 in Orange County California one of the premier technology centers in the United States. HDV-Sports technology is based on a wealth of engineering experience gained from 30 years of product development. Our headquarters are located in Anaheim.

SQL Server database

"HDV-Performer 5.2" uses SQL Server File structure which enables a user to easily categorize their video clips and activities into four groups- User, Organization, Activity and Event.

Playback Editing & Speed

The HDV-Playback software allows the viewer to set the start point and the end point of each video clip. This cropping of the video allows the viewer the option of watching just the significant action of each video clip. The viewer can select loop playback feature to view the video clip over and over. The playback speed can be slowed from 1/20 to 1/50 of the normal speed. The viewer may also pause the video clip anytime in the video sequence and advance or reverse the video clip one frame at a time. All recorded video is at 30 frames per second which will provide superior full-motion playback whether it's recorded at either standard or high-definition formats.

"HDV-Performer 5.2" Software Module

This software has a diverse range of applications; the following sports modules are currently available:

The following sports modules are currently available:

- Basketball
- Football
- Soccer
- Track and Field
- Gymnastics
- Wrestling
- Baseball
- Women's softball
- Water polo
- Swimming
- Golf

With *Baseball*, you could record the following data for every pitch thrown

- Team name and opponent's name
- Current: Score, inning, pitch count
- Batter's name
- Batter bats right-handed or left-handed
- Pitcher's name
- Pitch type thrown
- Runners on which bases
- Infield defense set-up
- Outfield defense set-up

(Some examples of the 20 user-definable data fields)

Recording hardware (camcorder and laptop)

"HDV-Performer 5.2" software can be purchased as complete package or you may use your existing hardware. The standard "HDV-Performer 5.2" software package includes one sports module and three coaches. Additional sports modules may be purchased at any time.

"HDV-Performer 5.2" software is designed to allow the coaches to determine what text information they would like associated with each video file. There are 20 user-defined fields that can be labeled to each coach's preference. When opened, each of these 20 fields could provide another 100 parameters bringing the total to 2,000 data parameters.

The HDV-Playback software allows the viewer to set the start point and the end point of each video clip. The cropping of the video allows the viewer the option of watching just the significant action of each video clip. The viewer can select the loop playback feature allowing the viewer to watch the video clip over and over. The playback speed can be slowed from 1/20 to 1/50 of the normal speed. The viewer may also pause the video clip anytime in the video sequence and advance or reverse the video clip one frame at a time.
